JDBC Project

Write a well-documented well-structured Java program that utilizes JDBC to generate a report. The report will generate a list of what projects an employee works on and how many hours plus a summary of the total hours they work. The format will follow this example.

```
James Smith
     ProductX              32.5
     ProductY               7.5
                           ----
                           40.0

Franklin Wong
     ProductY              10.0
     ProductZ              10.0
     Computerization       10.0
     Reorganization        10.0
                           ----
                           40.0

Etc...
```

Notes on Report

1. The report will sort the employees in alphabetic order.
2. All decimal point will be printed in the same column.
3. The number of hours an employee works on a project and the total number of hours will be rounded to one significant digit.
4. The project name will be indented exactly 5 spaces.
5. The dashed line between the listed values and the total will be the equal to the width of the total.
